

Quotes

“For a long time, Hong Kong has continuously deepened its talent exchange with the mainland, and the close cooperation with Beijing talents in particular has yielded many fruitful results. The unveiling of the CUHK Beijing Centre will open a new chapter for exchange and collaboration between Beijing and Hong Kong. I anticipate it will present great opportunities to further coordinate technical resources and high-calibre talents from the two regions. By exploiting excellent platforms like The National (Zhongguancun) Torch Institute of Science and Technology and the HICOOL Global Entrepreneur Summit and Entrepreneurship Competition, talents from both regions can foster closer ties and mutual prosperity, seize shared opportunities, and serve the best development of the nation.”
Mr Liu Yuhui – Vice Mayor of Beijing Municipality

“The establishment of CUHK Beijing Centre is the key deployment of the University’s development in mainland China, helping to cultivate innovative professionals, and facilitating interdisciplinary science, innovation cooperation and academic exchange. The Beijing Centre acts as CUHK’s liaison hub in the capital, facilitating our various works in mainland China, supporting alumni activities, and strengthening collaboration between CUHK and its strategic partners. This expanding of the Beijing-Hong Kong cooperation brings mutual benefits with it. CUHK will promote the development of the Beijing Centre, so as to cultivate more talents for the country, Beijing and Hong Kong. This will open a more glorious chapter for CUHK’s development in mainland China.” Professor Rocky S. Tuan – Vice-Chancellor and President, CUHK

“CUHK established the CUHK Beijing Centre to promote academic exchange between the University and major institutions in Beijing, and deepen cooperation in education, technology and talent exchange. The National 14th Five-Year Plan clearly supports Hong Kong’s development into an international innovation and technology hub. As talent is the key factor in promoting I&T development, Hong Kong needs more I&T talents. The HKSAR government has set up Dedicated Teams for Attracting Businesses and Talents in the Mainland Offices and overseas Economic and Trade Offices to proactively reach out to target enterprises and talents and persuade them to pursue development in Hong Kong, and launched the Top Talent Pass Scheme to attract high-end professional talents and graduates from the world’s top universities. The HKSAR government will continue to work hand in hand with universities and other institutions in Hong Kong. We are determined to be at the forefront of scientific and technological innovation, support the nation’s rise as a science power, and give full play to Hong Kong’s unique advantages of being backed by the mainland and connected to the world.” Mr Chang Wai-yuen – Director of the Beijing Office of the HKSAR government.
