

About Cornerstone Robotics

Cornerstone Robotics (CSR) is dedicated to delivering accessible surgical systems that allow patients around the world to benefit from the highest standards of care.

Founded in 2019, we have assembled an international team of surgical robotics experts, clinical professionals, and expertise from a diverse range of disciplines. To accelerate our growth, we have established key innovation hubs in Hong Kong, Shenzhen, Beijing, Shanghai, and Boston.

We aspire to create safe, efficient, and precise surgical robots that enhance and extend surgical capabilities. This commitment forms the foundation for developing next generation technologies and penetrate surgical specialties of the future.

Cornerstone Robotics has multiple pipelines for the development of robots for soft tissue surgery and other surgical specialties. Our first-generation Endoscopic Surgical System is developed entirely in-house and has completed the clinical trials in both Hong Kong and Mainland. With multiple production facilities established in Greater Bay Area and corresponding supply chain support, we offer safe and accessible surgical robots to the world.
