About the Shun Hing Education and Charity Fund Professorship in Robotic Surgery

Shun Hing Education and Charity Fund established the Shun Hing Education and Charity Fund Professorship in Robotic Surgery in 2024. The Endowed Professorship in Robotic Surgery is part of the CUHK 's 60th Anniversary Named Professorship Scheme, which is among the highest honours that the university bestows upon academic colleagues. The professorship was established to support continued research in innovative robotic surgery, laying the foundation for more transformative medical diagnosis and treatment solutions that can ultimately improve lives.

CUHK has received substantial support from the Fund for projects across diverse domains over the years. In 2022, the Fund made a significant donation to CUHK to purchase a new robotic surgical system, which aims to overcome the limitations of current systems and reduce patient waiting times.
