

About the Tissue Engineering and Regenerative Medicine International Society

The Tissue Engineering and Regenerative Medicine International Society (TERMIS) was founded by key leaders of the former European Tissue Engineering Society (ETES) and the Tissue Engineering Society International (TESI). In January 2005, the leaders of these two organisations had the vision of joining the societies and forming one global organisation that links researchers in the field, advancing tissue engineering and regenerative medicine worldwide to generate knowledge with a view to improving patient outcomes. TERMIS has three region-based chapters: Americas, Asia-Pacific and Europe.
