

Appendix

Table 1: Outcomes of EUS-GE and duodenal stent treating patients with GOO

Outcomes	EUS-GE group (48 patients)	DS group (49 patients)
*6-month reintervention rate	4%	29%
Mean stent patency	174 days	148 days
Median hospital stay after procedure	4 days	6 days
1-month **GOOS	2.4	1.9

*6-month reintervention rate was defined as the percentage of patients requiring additional endoscopic intervention due to stent dysfunction within 6 months from procedure.

**GOOS = Gastric outlet obstruction score. This is a measure of patients eating function. A score of 0 = not being to tolerate oral diet, 1 = taking fluid diet only, 2 = taking soft diet, 3 = taking full or low residue diet.
